

AgriS (SBT) expanding the shareholder base, attracting new resources for the next growth phase

Foreign shareholder increases ownership, expanding the foundation for partnership with AgriS

Brilliant Solutions INC (BSI), a financial institution with its main operating base in Singapore, became a major shareholder of AgriS, holding a total of 48,015,592 shares, equivalent to 5.30% of the voting shares on September 28, 2026.

BSI focuses on investments in potential businesses across Asia. BSI's investment criteria target companies with large market capitalization, sustainable growth strategies, and global operations.

BSI's investment in AgriS followed an extensive period of research, discussions, and engagement between the two parties. The investment decision was based on the alignment between BSI's direction and AgriS's long-term development strategy, particularly in the agriculture–food sector.

As a strategic shareholder, BSI is expected to accompany AgriS in expanding international operations and connecting with partners and resources across regional markets.

AgriS currently has two major foreign shareholders, including Legendary Venture Fund 1, an investment fund in Singapore, with a 15.67% stake, and BSI, with a 5.30% stake in the voting shares. AgriS's foreign ownership ratio has increased by more than 16% over the past year, reaching nearly 22%, equivalent to more than 204 million shares.

AgriS, with a strong corporate governance foundation aligned with international best practices, continues to be included in various reputable indices and investment portfolios in the stock market.

As of September 2026, more than 182 million SBT shares were held by ETFs, including VanEck Vietnam ETF and Global X MSCI Vietnam ETF, as well as investment funds and proprietary trading divisions of domestic and foreign securities companies, up 4% YoY.

SBT shares also remained in indices and investment portfolios such as VNSI20, VN100, VNCG50, MarketVector Vietnam Local Index, and MSCI Vietnam Select 25-50 Index. Together with stronger corporate governance, information transparency, and alignment with international standards, this foundation further expands SBT's access to domestic and international investors.

Leadership team continues to increase ownership, strengthening long-term alignment

Alongside the increase in foreign ownership, AgriS's ownership structure also recorded a significant increase in holdings by its leadership team.

During late August and early September 2026, members of AgriS's leadership team collectively increased their ownership of SBT shares. In particular, Ms. Dang Huynh Uc My, Chairlady of the BOD of AgriS, completed the transfer of 11 million shares from Ms. Huynh Bich Ngoc, the Company's Founder. Mr. Thai Van Chuyen, BOD Member and CEO of AgriS, registered to purchase 15.5 million shares. Other members of the BOM also registered to purchase an additional 250,000 SBT shares.

In total, members of the leadership team registered to purchase 27.5 million shares, equivalent to approximately 3% of charter capital.

These transactions took place during AgriS's generational transition, further strengthening the alignment of the leadership team's interests with the Company's long-term development direction. They also represent a continuation of ownership and governance roles as AgriS expands into new growth drivers.

AgriS's BOD is committed to accompanying the Company through its new development phase, with a focus on long-term objectives

Solid business foundation, expanding new growth drivers

Changes in AgriS's shareholder structure are taking place as the Company expands into the agriculture–food ecosystem, with increasingly diversified growth drivers.

AgriS currently accounts for approximately 46% of the domestic sugar consumption market and has established an operating network across 88 countries. Building on this foundation, the Company continues to expand into the agriculture–food sectors while accelerating the application of technology and data throughout the value chain.

Recently, AgriS inaugurated the AgriS Global Innovation Center in Singapore. This milestone reflects the Company's direction of connecting knowledge, partners, and international markets to bring innovation into business operations on a global scale.

In FY2025–2026, AgriS recorded net revenue of VND 26.733 trillion and profit before tax of more than VND 911 billion. Notably, non-sugar segments contributed more than VND 4 trillion in revenue, equivalent to approximately 18% of total revenue, highlighting the increasingly clear contribution of new growth drivers within the Company's agriculture–food ecosystem.

AgriS focuses on developing an agriculture–food ecosystem with a diverse product portfolio spanning sugarcane, coconut, rice, fruit crops, and solutions for the agricultural sector.

From the generational transition and increased ownership by the leadership team to the increasingly prominent participation of international institutional investors, AgriS's shareholder base is expanding both in depth and breadth. Building on its existing business foundation and new growth drivers, this provides a basis for AgriS to continue implementing its long-term strategy, expanding international connectivity, and creating greater value across the agriculture–food value chain.
